# Coffee & Health

After analyzing data on **126,000** people for periods lasting as long as **18** years, Harvard researchers calculated that compared with not partaking in America's favorite morning drink, enjoying one to three cups of caffeinated coffee daily can **reduce the risk of diabetes** by single digits. However, having six cups or more each day slashed men's risk by **54%** and women's by **30%** over those of non-drinkers.
